DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-41 are rejected under 35 U.S.C. 102(b) as being anticipated by LaCombe (US 5872890).

Lacombe discloses the claimed invention including, *inter alia*, a flow through tube made of solid material surrounding the heating rod within the flow path, a plurality of temperature sensors located to determine the temperature and flow of fluid both at the inlet and outlet of the flow path, the sensors located on the top portion of the path with respect to gravity, a circulation pump and temperature control system responsive to the plurality of temperature sensors. It is noted that it has been held that the recitation that an element is "adapted to" perform a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense: *In re Hutchison*, 69 USPQ 138.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
